Operating Systems - Lab 3 (Jan 21)

For this lab assignment, you will write program using Java APIs.

Question

Write a Program in Java to create a binary search tree of integers using Java Collections Framework API and implement all the methods as mentioned below: Use JOptionPane for all inputs and outputs as follows:

- ✓ Insert 5--> would insert 5 in the BST and print the entire tree using one of the traversals
- ✓ Delete 5--> would delete 5 in the BST in case this node is available in BST, and then print the tree using one of the traversals.
- ✓ Preorder --> Prints the BST using preorder traversal
- ✓ Postorder --> Prints the BST using postorder traversal
- ✓ Inorder --> Prints the BST using inorder traversal

```
public void insert(int data) //inserts nodes in the BST
{

}

public void preordertraversal(    ) //Pre order traversal
{

}

public void inordertraversal(    ) //In order traversal
{

}

public void postordertraversal(    ) //Post order traversal
{

 }

public void delete(int data) // delete the node with the given value
{

}
```
