Non Graded Lab Assignment 1 – CSD 207 OOP in Java

For this assignment, you will solve problems based on what you have learned in Chapter: Strings and Text I/O.

Instructions

- Review the chapters from the book and class notes.
- There are 4 questions in this assignment.
- Assignment submitted after due date will not be evaluated.

Due Date and Time: September 7, 2018, in class.

Submitting this Assignment

You do not have to submit this assignment. When you have completed solving all questions, show them to the Instructor.

Grading Criteria

There are no marks to this assignment.

Questions:

1. **Write a program that repeatedly prompts the user to enter a capital for a indian state. Upon receiving the user input, the program reports whether the answer is correct. Assume that 29 states and their capitals are stored in a two-dimensional array. The program prompts the user to answer all states' capitals and displays the total correct count. The user's answer is not case-sensitive.**

2. **Write a program that counts the number of lines, number of words, and number of characters in a text file. The file name is passed as command line argument. The words are separated by white space characters.**

3. **Write a program that takes a java program (as .txt file) as a input and create another file after removing all the single line comments from the input java program.**

4. **Write a method that returns the common prefix of two strings. For example, the common prefix of "distance" and "disinfection" is "dis". If the two strings have no common prefix, the method returns an empty string. Write a main method that prompt the user the user to enter two strings and display their common prefix.**
