Non Graded Lab Assignment 8 – CSD 207 OOP in Java

For this assignment, you will solve problems based on what you have learned in Chapters: GUI Basics.

Instructions

- Review the chapters from the book and class notes.
- There are 3 questions in this assignment.
- Assignment submitted after due date will not be evaluated.

Due Date and Time: September 28, in class.

Submitting this Assignment

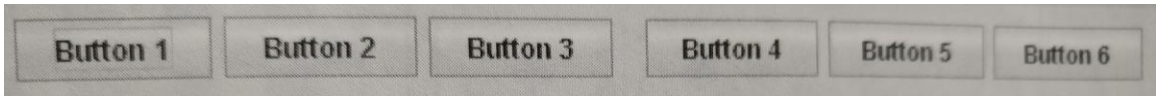
You do not have to submit this assignment. When you have completed solving all questions, show them to the Instructor.

Grading Criteria

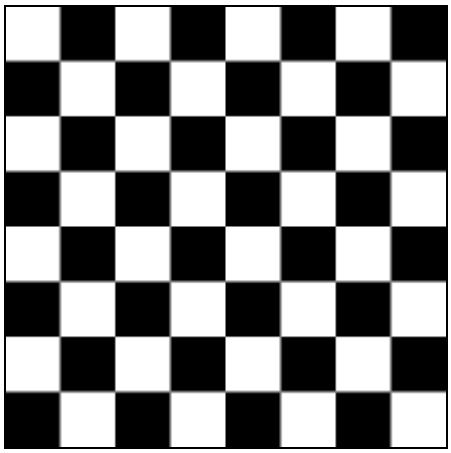
There are no marks to this assignment.

Questions:

1. Using FlowLayout Manager, write a program that meets the following requirements (see figure below):
    - Create a frame and set its layout to FlowLayout
    - Create 2 panels and add them to the frame.
    - Each panel contains three buttons. The panel uses FlowLayout.



2. Write a program that displays a frame for a 3*3 Tic tac Toe board, with 'O' and 'X' randomly placed in 7 of the 9 places. Player 1 uses 'O' and Player 2 uses 'X'. The program will check if any of the Players are winning and will display in console one of the following:
    - Player 1 wins
    - Player 2 wins
    - No one has won till now
    - Both have won, although it is not possible in real time.

Non Graded Lab Assignment 8 – CSD 207 OOP in Java


3. Write a program that displays a 8*8 checkerboard in which each white and black cell is a JButton with a white or black background.
